SUMMARY

Java and Spring Boot developer with proven experience architecting secure, real-time backends — from a low-latency ride-matching engine (Redis, WebSockets) to a multi-role CRM with JWT-based RBAC and Flyway migrations. Comfortable across the stack with React.js and Next.js when needed. Pursuing BCA at Presidency University, Bengaluru (GPA: 8.77/10.0), targeting SDE-1 and Backend Developer roles.

EDUCATION

Presidency University

Bachelor of Computer Application (GPA: 8.77/10.0)

Bengaluru, Karnataka

August 2023 – Expected June 2026

EXPERIENCE

Software Engineer (Freelance)

Dec 2025 – Present

Bengaluru, Karnataka

Crea Agency Dashboard

- Architecting a multi-role CRM for a creative agency using Spring Boot and PostgreSQL, implementing JWT-based RBAC, Flyway schema migrations, and Docker-based local-to-production environment parity.

Full Stack Developer – Narmada Mobile Care

- Built a zero-latency product catalog with client-side memoized filtering and URL state sync, eliminating database calls on every filter interaction.
- Optimized mobile performance by 40% using parallel data fetching (Promise.all) and responsive Next.js image sizing, reducing homepage payload from 2MB to 50KB.

PROJECTS

Auradrive | Java, Spring Boot, Swagger, Redis, WebSockets, MongoDB, Docker, AWS S3

Live link

- Built a low-latency driver matching system using Redis Geospatial data structures, reducing average location query time by 70% compared to traditional database table scans.
- Designed a stateless backend pipeline with Spring Security and JWT, eliminating server-side session overhead to support horizontal scalability, and leveraged MongoDB for high-throughput ingestion of driver location updates.
- Engineered an event-driven messaging framework with Spring WebSockets, delivering sub-second trip updates and eliminating 80% of unnecessary network overhead caused by HTTP polling.
- Containerized the application with Docker for Render deployment and integrated AWS S3 with pre-signed URLs, fully decoupling media processing from the core server and reducing primary server load.

Game Day | Java, Spring Boot, React.js, PostgreSQL, Supabase

Live link

- Replaced high-overhead REST polling with Spring WebSockets and Supabase Realtime persistent connections, reducing unnecessary network requests by 80% while streaming live system metrics in real time.
- Optimized heavy analytical queries for 30-day historical logs by implementing PostgreSQL materialized views and composite indexing, pre-computing complex aggregations to guarantee sub-second dashboard rendering.
- Built a synchronized React and Recharts visualization layer directly correlating JVM memory spikes with HTTP request latency, reducing root-cause analysis time from minutes to seconds.
- Automated 4xx/5xx anomaly detection with real-time threshold-based monitoring, triggering instant visual alerts and eliminating manual log inspection during traffic surges entirely.

Bengaluru Raksha | Javascript, Node.js, MongoDB, Twilio API, JWT

Live link

- Built a high-availability public safety backend with Express.js and MongoDB, exposing RESTful APIs for SOS alerts and emergency contact management supporting real-time crisis response.
- Implemented JWT-based authentication and authorization and GPS based SMS alerts using the Twilio API, enabling secure, low-latency emergency notifications.
- Engineered highly responsive SOS alert pipelines by applying compound indexing to critical contact fields, optimizing read-heavy emergency request paths for immediate data retrieval.

TECHNICAL SKILLS

Languages: Java 17, SQL, JavaScript (ES6+)

Backend Frameworks: Spring Boot, Spring Security, Spring Data JPA, Node.js, Express.js

Databases & Caching: PostgreSQL, MongoDB, Redis

Architecture & Messaging: WebSockets, REST APIs

DevOps & Tools: Git, Docker, Flyway, AWS (S3), Render, Maven, Mockito

Frontend: React.js, Next.js, Tailwind CSS
